WORDMARK

LOGO

The RDI wordmark is the primary brand identifier. Use the dark variant on backgrounds lighter than #CED3DA; use the reversed variant on backgrounds darker than #545B64. Never place the wordmark on the brand red.

LIGHT

DARK

VARIANT	FILE	MIN HEIGHT	CLEAR SPACE
Dark-on-light	logo-rdi.png	32px	½ × wordmark height
Light-on-dark	logo-rdi-white.png	32px	½ × wordmark height

GLYPH

IRIS APERTURE

The iris glyph is reserved for app icons, hero moments, and lockups. Never use it as an inline UI icon — its visual weight is too strong for a button or menu item.

IRIS APERTURE

Reserved for logo lockups, app icons, hero plates, and splash moments. The glyph echoes the camera aperture that underlies Motion Amplification® — every pixel becomes a sensor.

Minimum rendered size: 24px. Never outline, rotate, or recolor.

PALETTE · 13 STOPS

NEUTRALS

Paper whites and cool grays. Surfaces use gray-0–3; borders use 4–5; body text uses 9–11. Maximum dark-theme background floor is #343A40.

0	1	2	3	4	5	6	7	8	9	10	11	12
#FFFFFF	#FAFBFC	#F4F6F8	#EDF0F3	#E1E5EA	#CED3DA	#B0B7C0	#8A919B	#5F6773	#3D444D	#252A31	#14181D	#0A0C0F

ROLE	TOKENS	USAGE
Surface	gray-0 · 1 · 2 · 3	Page, subtle, section, hover
Border	gray-4 · 5	Dividers, card strokes, inputs
Text	gray-8 · 9 · 11	Tertiary, body, headings

PRIMARY · RDI RED

BRAND COLOR

RDI red is used *restrained*: CTAs, status alarms, small accents, one hero moment per view. The 500 stop is the true brand color; 600 is hover/press and for on-dark surfaces.

50	100	200	300	400	500★	600	700	800	900
#FFF1F1	#FFE2E3	#FFC7C8	#F59094	#D95257	#BA2528	#9B1C1F	#7A1517	#5A0E10	#3A0709

SECONDARY · INSTRUMENT CYAN

50	100	200	300	400	500	600★	700	800	900
#F0FAFC	#D9F2F7	#AEE1EC	#76C8DA	#3BA6BF	#1A86A1	#0F6A83	#095265	#063E4D	#03272F

TOKEN	HEX	USE
--accent	#BA2528	CTA, hero word, alarm
--accent-hover	#9B1C1F	Hover state
--accent-2	#0F6A83	Instrument readout, cyan counts

SIGNAL SEMANTICS

STATUS COLORS

Status colors encode instrument-panel semantics: machines either run in spec, drift into caution, or trip an alarm. Never use these as brand accents.

● IN SPEC	● CAUTION	● ALARM	● INFO
--status-pass #16A34A	**--status-caution** #D97706	**--status-alarm** #DC2626	**--status-info** #2563EB

TOKEN	USE	FOREGROUND INK
--status-pass	In spec, healthy, confirmed	#fff or #14532D on tint
--status-caution	Drifting, review needed	#fff or #7C2D12 on tint
--status-alarm	Trip, immediate attention	#fff or #7F1D1D on tint
--status-info	Informational, neutral	#fff or #1E3A8A on tint

BARLOW CONDENSED

DISPLAY TYPE

Condensed, confident, mechanical. Used uppercase for hero moments, page titles, and section headers. Never use for body copy.

HERO · 96PT · 800

VISUALIZE MOTION

H1 · 60PT · 700

FIND THE ROOT CAUSE

H2 · 40PT · 700

MOTION AMPLIFICATION®

CLASS	WEIGHT	CASE	USE
rdi-hero	800	Upper	Landing hero word
rdi-h1/h2/h3	700 / 700 / 600	Upper	Page/section titles
rdi-eyebrow	700	Upper · 0.14em tracking	Kicker above titles

INTER · JETBRAINS MONO

BODY & DATA

Inter carries every non-display word. JetBrains Mono carries every measurement, timestamp, and token reference.

BODY L · 18PT · 400

Motion Amplification® reveals what accelerometers can't: the shape of a fault.

BODY · 15PT · 400

Every pixel becomes a vibration sensor. Record once, analyze forever — assets, modes, and zones in a single scene.

CAPTION · 12PT · 500

FAMILY	USE	FEATURES
Inter	Body, UI, labels	ss01, cv11, calt · tabular-nums for data
JetBrains Mono	Readouts, tokens, timestamps	Always tabular; negative letter-spacing for readouts

4-POINT BASELINE

SPACING SCALE

A 4-point geometric scale. Steps 1–3 live inside components; 4–7 compose sections; 8+ orchestrate page rhythm.

`--s-1`	4px
`--s-2`	8px
`--s-3`	12px
`--s-4`	16px
`--s-5`	24px
`--s-6`	32px
`--s-7`	48px
`--s-8`	64px
`--s-9`	96px
`--s-10`	128px
`--s-section`	128+px

Never invent intermediate values. Compose larger gaps from stacked tokens. `--s-section` is a composition token (128px+) reserved for vertical rhythm between marketing sections.

CORNERS & ELEVATION

RADIUS & SHADOW

Radii stay tight. Data surfaces use 2–4px; cards use 6–8px; marketing surfaces may go up to 14px. Shadows are layered and restrained — we rely on hairline borders, not lift.

r-0 0px

r-1 3px

r-2 6px

Secondary	--bg-card	--fg-1	--bg-2 · border-3	sm / default / lg
Ghost	transparent	--fg-1	--bg-2	sm / default / lg
Danger	#991B1B	#fff	#7F1D1D	sm / default / lg
Link	transparent	--accent	underline	inline

FORMS

INPUTS

40px height baseline, hairline border, 4px radius. Focus is communicated with the brand accent plus a soft ring — never a color fill.

SIGNAL CHIPS

BADGES & STATUS

All status variants meet WCAG AA on both tint and solid fills. Tints for scan-friendly reading; solids for emphatic calls.

STATUS · TINT	IN SPEC · CAUTION · ALARM · INFO
STATUS · SOLID	IN SPEC · CAUTION · ALARM · INFO
TAGS	Aerospace · Wastewater · Power Gen · Oil & Gas
TRADEMARK	Motion Amplification® · TrueSight™ · Iris aiOne™
COUNTS	14 · 128 · 3 new · 3 alarms · 241.6 Hz

Tabular numerals in all counts. Minimum contrast: 4.5:1 for 11pt, 7:1 target on data surfaces.

LUCIDE · 1.75PX STROKE

ICONOGRAPHY

Lucide is the sole icon family. Monochromatic, 1.75px stroke, 18px default. Never mix with emoji. Never recolor beyond the current-color inheritance.

SIZE	PIXEL	USE
Inline	14px	Inside body text
Default	18px	UI buttons, menus, cards
Feature	24px	Section leads, empty states
