RDI TECHNOLOGIES

BRANDING GUIDELINES

The RDI Technologies brand guidelines were developed to help our team and partners understand what makes the RDI brand so unique in the vibration monitoring industry, and how to best represent our solutions in marketing and communications materials. In other words, this guide aims to ensure the messaging that is essential to the RDI Technologies brand.

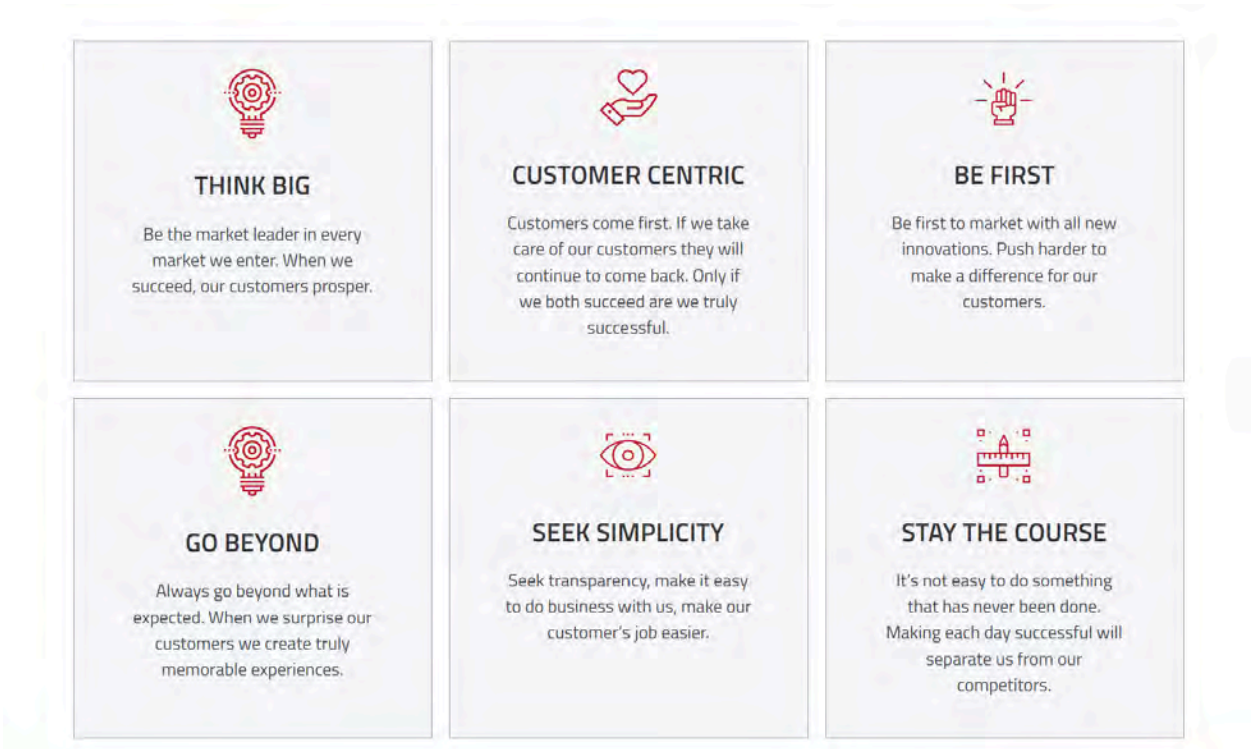
The brand elements shown in the following pages are linked to content on the RDI website, which you can access via the links in this . If you have questions on the brand guidelines, please contact RDI Marketing at marketing@rditechnologies. com..

Brand Guidelines: Brand Messaging

Brand Messaging

Our Message

Create first-to-market motion and vibration detection products that utilize proprietary camera-based technology and enables customers to visually distill complex data sets so they're easy to see, understand, and analyze.



Think Big

Be the market leader in every market we enter. When we succeed, our customers prosper.

Customer Centric

Customers come first. If we take care of our customers they will continue to come back. Only if we both succeed are we truly successful.

Be First

Be first to market with all new innovations. Push harder to make a difference for our customers.

Go Beyond
Always go beyond what is expected. When we surprise our customers we create truly memorable experiences.

Seek Simplicity
Seek transparency, make it easy to do business with us, make our customer's job easier.

Stay The Course
It's not easy to do something that has never been done. Making each day successful will separate us from our competitors.

Brand Guidelines: Brand Positioning

Brand Positioning

POSITIONING STATEMENT

"RDI Technologies is a world leader and first-to-market innovator and inventor of the Motion Amplification® powered IRIS™ platform technology for motion and vibration detection and analysis."

We are dedicated to the concept of "Seeing is Believing" and creating new ways to visualize what is invisible to the human eye.

We are committed to the camera as the sensor of the future because visualization is faster, safer, and makes the complex more simple.

We believe visualizing motion and vibration at imperceptible levels provides a deeper understanding and increases the usability of complex data.

We believe in the power of combining customer feedback with cutting edge technology to drive product design that maximizes user experience.

We pioneer camera-based Motion Amplification® technologies that maximize efficiency and improve communications between technical and non-technical resources.

Data should be easily accessible and highly actionable to empower companies to make informed decisions.

Brand Guidelines: Logos & Taglines

Logos & Taglines

Parent Mark

All RDI Technologies logos should be reproduced consistently and in high image quality. Be sure there is sufficient contrast between the logo and the background. On dark backgrounds, the logo should be displayed with the lighter gray to ensure good contrast and readability.

Download Full Color Logo to use on LIGHT backgrounds

Download Full Color Logo to use on DARK backgrounds

on LIGHT backgrounds

Download Full Color Logo to use on DARK backgrounds

Parent Mark Grid

Maintain proper clearspace, the area that surrounds the logo and maximizes its visual impact. Adequate clearspace ensures the logo is presented with the proper amount of heirarchy and legibilty. It should be free of any other element, including text, graphics, borders, or other logos.

Alternate Marks

These single-color alternate marks may be used when format or production methods require one color or when the contrast of the full-color logo and the background is low.

Download Single Color Red Logo

Download Single Color Black Logo

Download Single Color White Logo

Product Marks

Product logo marks should maintain size and clear space consistency around the camera icon. The positioning line, “Enhancing Vision” should always be left-aligned and consistently locked-up in size to the parent product name. Product names can be displayed with or without the positioning line.

Technology Marks

All trademarks must be present the first time the word or phrase is listed on a page, except Motion Amplification®, which should be marked for each use. These terms must be used as a proper noun and not a description. For example, "RDI's proprietary Motion Amplification® Software turns millions of pixels in a camera into sensors capable of measuring and visualizing motion within seconds". Do not use "the video is then Motion Amplified" or use Motion Amplification® as a description of what we do. Also, avoid using "Motion" or "Amplified" as descriptors. Use something like the "movement become visible". Motion Amplification® should not be synonymous with a simple description but instead be a brand.

Brand GuidelinesTypography

Typography

Primary Wordmark Typeface

ITC Avant Garde Gothic is a geometric, sans serif typeface with a modern presentation. Used as RDI's primary wordmark typeface, it establishes the brand's strong tone. It can be purchased for license or activated with an Adobe Font subscription.

Typeface Notes

For RDI employees who don't have an Adobe Cloud account, **Titillium Web,** is an open-source option that you can download from Google Fonts. Although **Tahoma** is not one of our official fonts, it is an alternate choice if you don't have access to our fonts or if you're creating a document or presentation template that will need to be used by those who may not have access to our font.

Brand Guidelines Color Palette

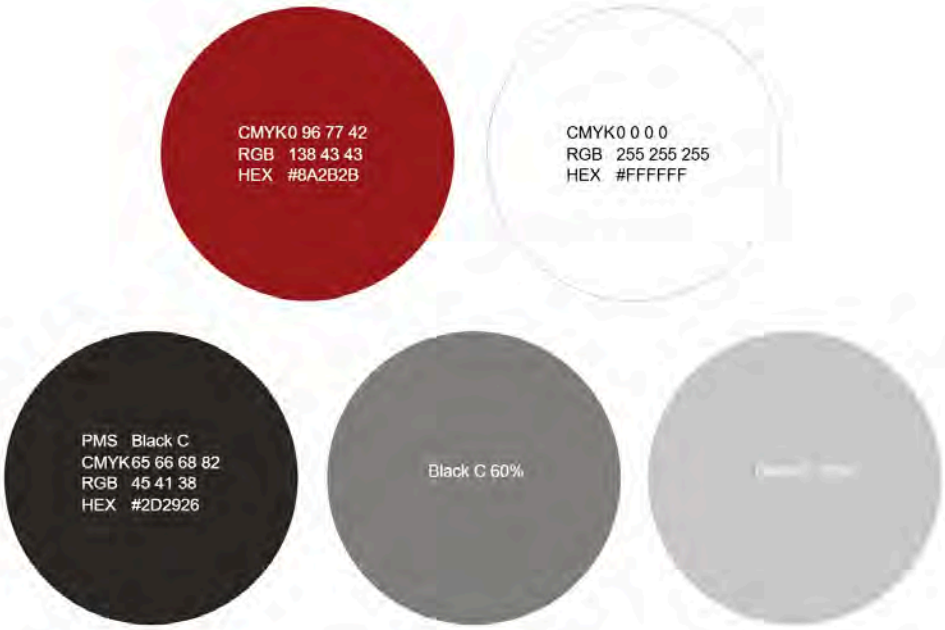
Color Palette

Primary Color Palette

The brand palette provides a customized spectrum for the visual identity. The exact hues are designed to work together for brand recognition and product affiliation. HEX, CMYK and RGB equivalents are provided to ensure consistency across media.

RDI Primary Red Special Notes: For branded items that involve *print or screenprinting*, the Pantone/ PMS for our primary red is 7623 C. For items that require *embroidery*, Madeira thread color code 1038 Barn Red is a close match to our primary red.

RDI Gray Special Notes: We have **two versions of our full-color logo,** one for use on light backgrounds and one for use on dark backgrounds.
For branded items that involve *print or screenprinting* use the darker gray on light backgrounds (PMS Cool Gray 10C) and the lighter gray on dark backgrounds (PMS Cool Gray 4C). For items that require *embroidery*, Madeira thread color code 1240 Stone is a close match to our dark gray.



Secondary Color Palette

The secondary colors should be used less frequently than the primary colors. They work well as accent colors or as main colors in applications that would benefit from standing out from the core

Brand Guidelines: Powerpoint template

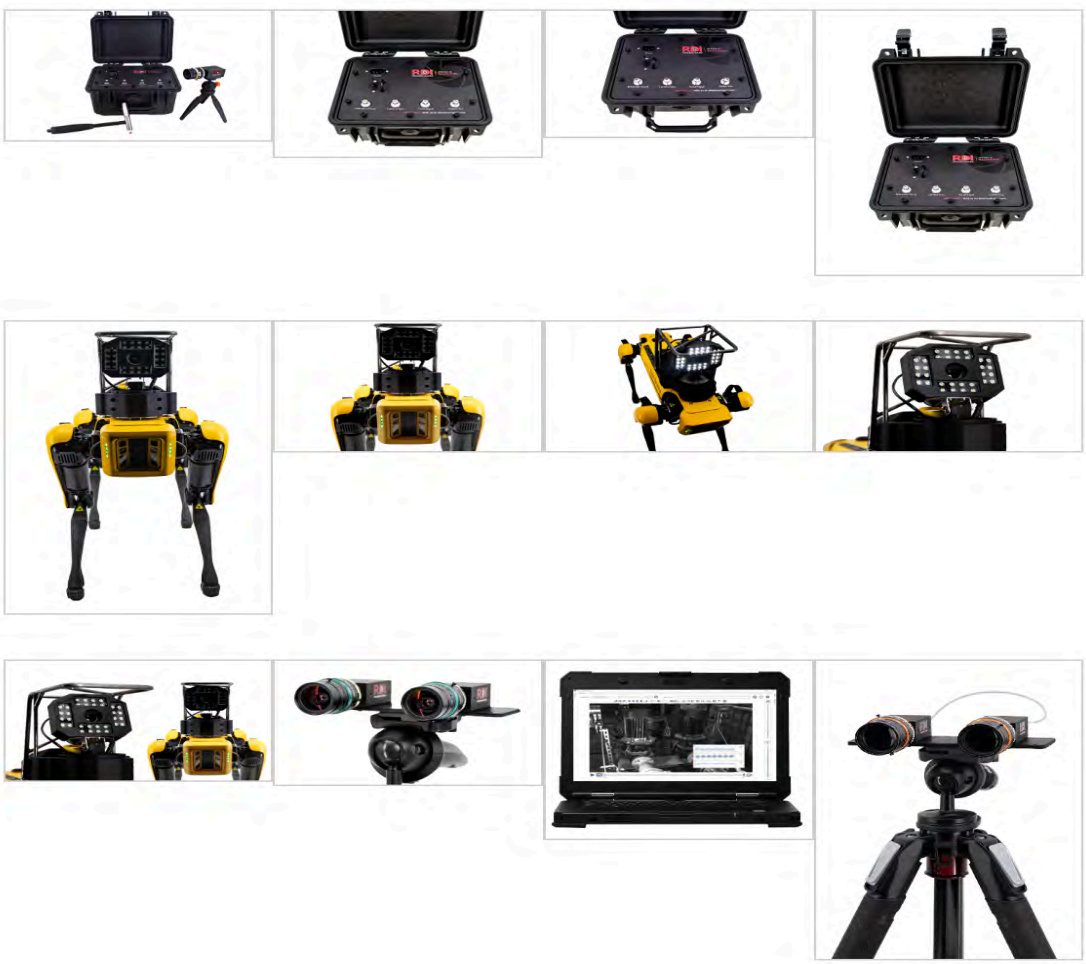
Brand Guidelines: Photography

Photography

Silhouette Photography

All products should be shot with rim lighting to enhance and highlight the product features and angles. Subtle shadows should be created in scenes when photographing in the studio. White exterior backgrounds will always be white-balanced in the post in order to create a seamless background when placed online. A clean, technical approach should be considered when photographing equipment and accessories.

Some examples of approved product images are below.



To access the files from our website, click here.

Lifestyle Photography

Lifestyle photography, including product photography in use, should maintain a professional, modern look. The RDI logo and/or product logo should be clear and in focus when the product is featured.

Brand Guidelines: Social Media

Social Media

RDI utilizes its social media platforms to disseminate information on upcoming events, new features and products, industry news, training, conferences, awards, tutorials and collaborating with users and partners globally. We recommend partners use the various @ features for the specific social media channel to tag RDI Technologies if appropriate so that RDI can share with its followers and promote both parties. This is especially true for videos using the Motion Amplification® software. RDI Technologies is always interested in partnering on case studies and promotional posts. If you have any questions about our social media channels or wish to partner with us on a promotion please contact us at marketing@rditechnologies.com.

Hashtags

Frequent use of branded hashtags on social media is vital for visibility in B2B marketing. Social media algorithms know what hashtags are related to an individual user's interests. RDI's branded hashtags are associated with other industry hashtags, meaning algorithms will suggest RDI content to those interested in related content. Using the algorithm to our advantage increases the bandwidth of social media posts from RDI and RDI employees.

Further, users who see branded hashtags regularly are likely to use them in their own social media posts when discussing related content.

While hashtags make a post more visible, too many can also make a post look like spam, and most social media algorithms will punish posts with an inappropriate amount of hashtags. Algorithms generally allow for a maximum of six hashtags before negative consequences, but to avoid creating posts that look like spam to a user, three to four should be the limit. Remember, generic hashtags like #picture or #technology are too broad to reach a relevant audience; impressions do not always correlate with results, especially if the content does not directly relate to the hashtag.

Branded Hashtags:

#MotionAmplification #IrisM #IrisMX #IrisCM

Generic Industry-Related Hashtags:

#Reliability #TestandMeasurement #PredictiveMaintenance

Email Signature

Every email that comes from RDI Technologies reflects upon the company. Using one simple, branded email signature helps strengthen RDI Technologies' visual identity. Follow these guidelines to ensure the best formatting and best usage of your email signature. Do not add anything to the signature file such as quotes or additional graphics.

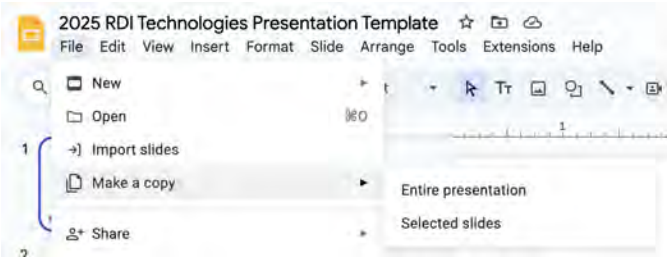
Brand Guidelines: Powerpoint template

Powerpoint template



To copy a Google Slides template without overwriting branding, open the template, go to **File > Make a copy**, and save it under a new name in your Google Drive. Use the existing slide layouts to add your content, replacing placeholder text, images, and charts without modifying brand elements like logos, fonts, or colors.

Avoid editing the Master Slides or changing the overall design. Stick to the pre-set color palette and fonts to maintain consistency. When finished, adjust sharing permissions if needed and review your presentation to ensure it aligns with branding guidelines.
